DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 2, 22, and 34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The above claims recite the term "standard documents". This is impermissible in claim language because one would not know the limitations of what a "standard" document would be.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Erickson.

Erickson shows, figure 2, a centrally coordinated communication systems with multiple broadcast data objects and response tracking. The system has databases 24, 34, and 36 (one or more document repositories). Database 24 (global content directory) includes classes (30) with a class and product hierarchy. Buyers, sellers, class, and

product all interrelated and cross-referenced. Databases use field identifiers or "pointers". Server 50, "Database access/update processing" acts as a search interface (see "info request" 56), a security interface (access decrypt, also note that portions of documents are released at times denoting access levels) and an intelligence module (update, reissue). Note column 8, line 18 where a predefined (standard) set of information is used. Note column 7, line 63 where a selected (unique) set of information is used.

Response to Arguments

Applicant's arguments filed 4/14/05 have been fully considered but they are not persuasive.

The examiner apologizes for overlooking claim 35. The rejection has been modified to reflect the omission and the action is non-final.

The examiner and applicant have been discussing what limitations should be placed on the term "decrypt". The examiner is using the standard of broadest reasonable meaning of a word in its ordinary usage, as they would be understood by one of ordinary skill in the art. In this case, a dictionary definition for the term "decrypt" has been recited by the examiner, which clearly indicates a reasonable meaning. Applicant does not provide an express definition for "decrypt" in their specification. The fact that applicant can point to usages that conform to their interpretation does not make

the examiner's definition unreasonable, especially because the examiner is relying on a dictionary definition that supports his interpretation. Applicant has a security module and the prior art has a security interface. After access is granted in both, both then convert machine-readable information into a human-readable format. The examiner believes this meets the broadly recited claim language.

The same argument above applies to applicant's assertions as to the term "document".
